

AMMAR HANNUN

Computer Science Student | AI Specialisation | Machine Learning & Automation

Sydney, NSW | +61 435 035 189 | aahannun@gmail.com | linkedin.com/in/ammarr-hannun-2223b12b8

PROFILE

Computer Science student specialising in AI with hands-on experience across machine learning, deep learning, software engineering and Microsoft Power Platform automation. Built benchmarking pipelines, medical-image classification models and workplace automation tools using Python, PyTorch, scikit-learn, XGBoost, Random Forest, Power Automate and Power Apps. Strong communicator through tutoring, mentoring and client-facing roles.

EDUCATION & CERTIFICATIONS

UNSW - Bachelor of Computer Science, Artificial Intelligence Specialisation | 2025 - Present

UNSW College - Diploma in Computer Science | 2024 **Dar Jana International High School - Valedictorian** | 2023

Certifications: Microsoft & LinkedIn Generative AI Certificate

TECHNICAL SKILLS

Programming: Python, Java, C, JavaScript, SQL

AI/ML & Data: PyTorch, scikit-learn, XGBoost, Random Forest, ResNet50, CNNs, LSTMs, pandas, NumPy, model evaluation, data visualisation

Automation & Tools: Power Automate, Power Apps, SharePoint Lists, Microsoft Copilot, Excel, Outlook, Git/GitHub, Jupyter, VS Code, APIs

Software Engineering: OOP, data structures, algorithms, debugging, modular design, test-driven development

RELEVANT COURSEWORK & FOCUS

Coursework: Machine Learning & Data Mining, Neural Networks, Artificial Intelligence, Data Structures & Algorithms, Software Engineering, Computer Systems and Object-Oriented Programming

Focus areas: Practical ML experimentation, automation, model evaluation, explainable results, clean code and user-focused technical communication

EXPERIENCE

IT / Power Platform Intern - EDGO | Jan - Feb 2026

- Built Power Automate flows using SharePoint, Outlook and Excel connectors to automate email notifications, spreadsheet updates, approvals and trigger-based workplace processes.
- Developed a Power Apps sign-up platform backed by SharePoint Lists, converting employee submissions into structured, manageable data for the IT team.
- Explored Microsoft Copilot and AI-agent concepts to identify opportunities for smarter workflow support and employee self-service.

Math & Science Tutor - A2 Tutors | Sep 2024 - Present

- Tutor mathematics and science across multiple year levels, simplifying complex topics into clear steps and building customised study plans for exam preparation.
- Strengthen communication, leadership and problem-solving skills through 1:1 and small-group teaching.

Peer Mentor - UNSW College | Sep 2025 - Present

- Support first-year students with onboarding, study habits, campus navigation and referrals to support services, helping improve transition and confidence.

Student Consultant / Customer Service - International Group for Educational Consultancy | Nov 2023

- Guided prospective students across UG-PhD pathways, explaining documentation requirements, deadlines and application steps while managing follow-up calls.
- Assisted students and families during multi-university events, guiding enquiries, explaining study options, and supporting smooth event operations.

Student Ambassador - 800 SAT Center | Jun - Jul 2022

- Supported student enquiries, centre events and social media engagement to improve the student experience and promote programs.

SELECTED PROJECTS

Machine Learning Benchmarking: xRFM, XGBoost & Random Forest | April 2026

- Built a tabular ML experimentation pipeline comparing xRFM against XGBoost and Random Forest across classification and regression datasets, including preprocessing, hyperparameter tuning, model evaluation and runtime comparison.
- Evaluated performance using accuracy, AUC and RMSE, and explored feature importance/interpretability to compare model behaviour beyond headline scores.

Breast Cancer Classification & Segmentation | Jul 2025

- Trained ResNet50 transfer-learning models to classify ultrasound images as benign, malignant or normal, with segmentation techniques to highlight tumour regions for computer-aided diagnosis research.
- Applied PyTorch, preprocessing, model evaluation and medical-image analysis skills in a deep learning workflow.

Characters & Hidden Unit Dynamics | Jun 2025

- Implemented Linear, MLP, CNN, SRN and LSTM models in PyTorch for classification and sequence prediction, comparing accuracy, parameters and hidden-state behaviour.

Navigation System | Apr 2025

- Simulated route planning under road closures and dynamic conditions using graph algorithms, data structures and debugging techniques.

Additional Technical Projects

- Huffman coding compression/decompression (recursion, trees, frequency analysis); File & Directory Management System in C (file I/O, metadata reports); Dungeon game refactoring in Java (OOP, Strategy/Composite/Decorator, testing).
- Train System Simulation (Java OOP, cargo management and scheduling); Toohak Interactive Quiz Platform (backend systems, user management, leaderboards and Git/GitHub collaboration).

ACHIEVEMENTS & LEADERSHIP

- Valedictorian and top of class at Dar Jana International School; recognised for academic performance and leadership.
- Strong STEM foundation through AP Calculus, Biology and Physics; experience presenting technical work, mentoring peers and communicating with non-technical users.
